this book presents the construction and resolution of 50 practical optimization problems and covers an exceptionally wide range including games associated problems unblock me sudokus logistical problems and problems concerning plant distribution production operations scheduling management and resource allocation the problems are divided into 5 difficulty levels problems in the first few levels are focused on learning the model construction methodology while those in the last level include complex optimization environments for each problem solution the specific steps are illustrated promoting reader comprehension in addition all the models are implemented in an optimization library lingo their solutions have been analyzed and their correct construction has been verified the book also includes a simple guide to implementing models in lingo in a straightforward manner and in any input data format text files spreadsheets or databases as an ideal companion to the author s previously published work modelling in mathematical programming the book is intended as a basic tool for students of operations research and for researchers in any advanced area involving mathematical programming

the text provides a solid foundation in mathematical modeling and optimization techniques ensuring that readers develop a deep understanding of the core concepts before delving into more complex topics it discusses analytical techniques used to solve structural performance potential flow analysis fluid flow control in mems two fluid nonlinear model and unsteady
